## 1. Acronyms and Definitions

AI	Analog Input
APM	Advanced Process Manager
AO	Analog Output
CL	Control Language
DI	Digital Input
DISOE	Digital Input Sequence of Events
DO	Digital Output
EHPM	Enhanced High Performance Process Manager
FTA	Field Termination Assemblies
HLAI	High Level Analog Input
HPM	High performance Process Manager
IEEE	Institute of Electrical and Electronics Engineers
ISPA	Intrinsically Safe Power Adapter
IOP	Input/Output Processors
LCN	Local Control Network
LLMUX	Low Level Multiplexer
NIM	Network Interface Module
NIPA	Non-Incendive Power Adapter
OTD	Open-thermocouple detection
PM	Process Manager
PU	Process Unit
RHMUX	Remote Hardened Multiplexer
SDI	Serial Device Interface
SI	Serial Interface
STI	Smart Transmitters Interface
PI	Pulse Input
PV	Process Variable
TPN	TPS Process Network
TPS	TotalPlant Solution
UCN	Universal Control Network

## 2. Introduction

The Process Manager (PM), Advanced Process Manager (APM) and High Performance Process Manager (HPM) are Honeywell's leading **TotalPlant** Solution (TPS) system control and data acquisition devices for industrial process applications. They represent a powerful combination of cost-effective Honeywell controllers which can be applied to solve a broad range of industrial process control problems.

The PM, APM, HPM, and EHPM offer highly flexible I/O (input/output) functions for both data monitoring and control. One of the unique features of this family of controllers is its common set of Input/Output Processors (IOPs) and Field Termination Assemblies (FTAs). All IOPs and FTAs are usable by all three controllers (with only minor exceptions).

This specification and technical data sheet provides information on PM, APM, HPM, and EHPM IOPs and FTAs. Please refer to the following specification and technical data sheets for information about each controller:

- **PM03-400** - Process Manager Specification and Technical Data
- **AP03-500** - Advanced Process Manager Specification and Technical Data
- **HP03-500** - High Performance Process Manager Specification and Technical Data
- **EHPM03-600** - Enhanced High Performance Process Manager Specification

### 3. Functional Description

#### 3.1. Functional Overview

I/O Processors, along with Field Termination Assemblies (FTAs), perform input and output scanning and processing on all field PM/APM/HPM/EHPM I/O (Figure 2).

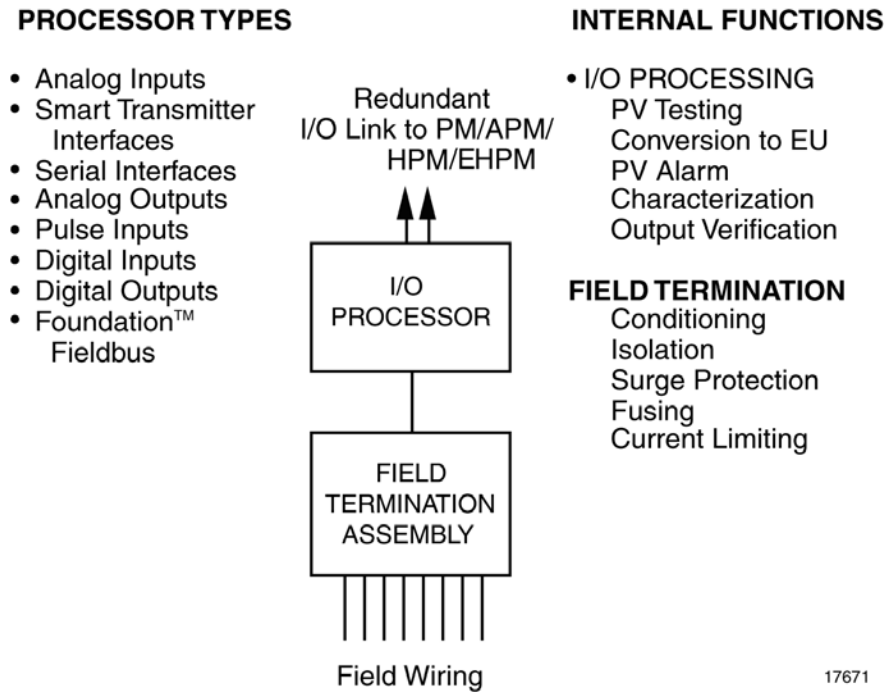

Figure 2 — PM/APM/HPM/EHPM I/O Functions

A redundant I/O Link is standard for maximum security. Optionally, High Level Analog Input, Smart Transmitter Interface, Analog Output, Digital Input and Digital Output processors can be redundant. I/O processing is performed separately from control processing functions so that I/O scan rates are completely independent of I/O quantity, controller loading, processing, and alarming. This partitioning of functions allows more efficient use of advanced Control Processor capability and provides for future I/O expansion.

A variety of I/O processors are available for the PM controllers:

- Analog Input–High Level (16 points)
- Analog Input–Low Level (8 points)
- Analog Input–Low Level Multiplexer (32 points)
- Smart Transmitter Multivariable Interface (16 points)
- Analog Output (8 points)
- Analog Output (16 points)
- Serial Device Interface (16 points—2 ports)
- Serial Interface (32 arrays, 2 ports)\*
- Pulse Input (8 points)
- Digital Input (32 points)
- Digital Input 24 Vdc (32 points)
- Digital Input Sequence of Events (DISOE) (32 points)\*

- Digital Output (16 points)
- Digital Output (32 points)
- Foundation Fieldbus (127 slots, 4 Fieldbus segments)\*\*

\* *APM, HPM, and EHPM only*

\*\* *HPM and EHPM only*

Any mix of the above I/O processors can be selected for a PM/APM/HPM/EHPM controller. This can be any combination of single and/or redundant (HLAI, STI, AO, DI and DO) pairs, up to a total of 40. Even with the maximum complement of 80 physical IOPs, there is no impact on control or communication performance. In a redundant IOP configuration, control automatically transfers to the backup I/O processor during board replacement or failure.

While a separate FTA of a given type is required to handle varying field wiring signal levels, identical I/O Processors can usually be used. This I/O approach simplifies system hardware selection and minimizes spare parts requirements. For example, one Digital Input Processor can handle 24 Vdc, 120 Vac, 125 Vdc or 240 Vac, depending on the FTA selected.

## Analog Input

**High and low level analog input** (HLAI + LLAI - 8) processors both perform signal conversion and conditioning functions:

- PV Source (Auto, Manual, Substituted)
- PV Clamping
- EU Conversion
- PV Value Status
- PV Filter (Single Lag)
- Bad PV
- PV Hi/Lo
- PV HiHi/LoLo
- PV Rate-of-Change +/-
- Software Calibration
- Low PV Cutoff

They perform engineering unit conversion, including fifth-order polynomial temperature input characterization, if the high level processor receives these inputs from mV/I converters. Through use of a dual processor design and custom integrated circuits, the low level analog input processor supports software configuration per channel for different thermocouples or RTD types with excellent resolution and accuracy. Open thermocouple detection is performed once per scan so that no bad data is propagated for control processing.

The **Low Level Multiplexer (LLMUX)** processor provides an economical way to bring in a large number of data acquisition signals. Each processor can handle 32 points, using two 16-point FTAs. Every point is scanned once per second with a one second scan delay for processing. Open thermocouple detection is performed every 30 seconds for all points. Options for either local or remote cold junction reference are available.

The **Remote Hardened Multiplexer (RHMUX)** processor provides functionality similar to that of the LLMUX, but the two 16-input FTAs may be mounted up to 2 km away from the xPM cabinet. Each FTA is mounted in its own NEMA-4 or -4X enclosure, providing protection against precipitation, hosedown, and windblown dust. The FTA itself is conformally coated, and is capable of operation in a GX "Severe" corrosive environment and in the presence of condensing humidity.

Power for the RHMUX's remote FTAs is provided by one of two power adapters, which provide power limiting, serial data interfaces, and galvanic isolation. The power adapter mounts in the FTA tray in the xPM cabinet, and provides the interface between the IOP and the two remote FTAs. The Intrinsically Safe Power Adapter (ISPA) allows the FTAs to be placed in Division 1 or Zone 0 environments. The Non-Incendive

Power Adapter (NIPA) provides an economical means to allow the remote FTAs to be placed in Division 2 or Zone 1 environments.

Every point is scanned once per 4 seconds. Data is made available at the end of each scan; there is no additional processing latency. Open-thermocouple detection (OTD) is optionally performed on every measurement. If enabled, the OTD test is performed immediately after the A/D conversion. If the test indicates an open thermocouple, data from the just-completed conversion will not be propagated.

To prevent spurious ground paths from affecting readings, ground-fault detection is performed. All RHMUX remote FTAs are equipped with a local cold junction reference. The RHMUX IOP is configured into the TPS PM system as a standard LLMUX. This permits using the RHMUX in Release 300 and greater systems.

## Smart Transmitter Multi-Variable Interface (STI-MV)

The Smart Transmitter Multivariable processor is the PM/APM/HPM/EHPM's digital interface to Honeywell's advanced series of smart transmitters.

Each STI-MV processor can communicate bi-directionally with up to 16 smart transmitters, including:

- ST3000 Pressure Transmitters
- STT3000 Temperature Transmitters
- MagneW 3000 Magnetic Flowmeters

These transmitters are used for pressure, temperature, and flow measurement

Each STI-MV processor also has the ability to accept up to four PVs each from the following multivariable transmitters:

- SCM 3000 Coriolis flowmeter
- Drexelbrook SLT level transmitter
- SMV3000 Multivariable Pressure Transmitter
- SGC3000 Gas Chromatograph

Multivariable transmitters provide the high accuracy of a digital interface while reducing wiring costs because multiple PVs are available over a single pair of wires.

Each IOP can accommodate DE inputs to a maximum of

- 16 single PV inputs from Smartline transmitters
- Four multivariable field devices with up to four PVs each, or
- A mix of single and multivariable field devices that equals up to 16 inputs per IOP (some restrictions apply)

The STI-MV Interface supports the functions for PV processing, EU conversion, and alarming supported by the other analog input processors (see above). It also provides Bad PV and Bad Database protection for added security.

All communications from the STI-MV processors to the Smart Transmitter are bit-serial, bi-directional, using the Honeywell DE (digital enhanced) protocol.

An individual at a Universal Station can perform any of the following functions

- Display primary and secondary Process Variables
- Display/Modify/Configure the transmitter database
- Re-range the transmitter
- Save/Restore the database
- Support calibration commands
- Display detailed transmitter status information
- Display the transmitter scratch pad, serial number, and revision level.

Enhanced digital accuracy is provided for all signals, resulting in accuracy that typically is three times better than that of analog.

### Serial Device Interface (SDI)

The Serial Device Interface processor provides connection to field devices that use serial communications (EIA-232 or EIA-485). Inputs from these devices are mapped into the I/O database and can be used directly for calculations and control. Since communication is bi-directional, information such as target value or damping factors can be written to or read from the field device. Specific serial devices are supported by custom programmable modules.

One such device is the UDC 6000 Process Controller, which provides single-loop remote display and control capability. Operating as a subsystem of the PM/APM/HPM/EHPM controller, the UDC 6000 displays PV, SP, and OP on front panel bar graphs. When digitally integrated with the PM/APM/HPM/EHPM, the UDC Controller can be configured for the following modes:

- Manual/Auto (M/A) Station where all control resides in the PM, APM, HPM, or EHPM.
- M/A Station with emergency backup control.
- Stand-alone control with the PM/APM/HPM/EHPM as supervisor.
- Stand-alone control with remote SP from the PM, APM, HPM, or EHPM.

Another device is the Toledo Weigh Cell (T8142), providing weight, setpoint control of feed (fast cutoff) and rate of change alarming.

### 3.2. Serial Interface (SI) (APM, HPM, and EHPM only)

The **Serial Interface** IOP provides a communications interface to Modbus or Allen-Bradley compatible subsystems (see Figure 3). Each serial interface IOP, by way of a Power Adapter, supports any combination of up to two FTAs. Note that the SI IOP is supported by the APM, HPM, and EHPM *only*. Each FTA supports one port and up to 16 array points.

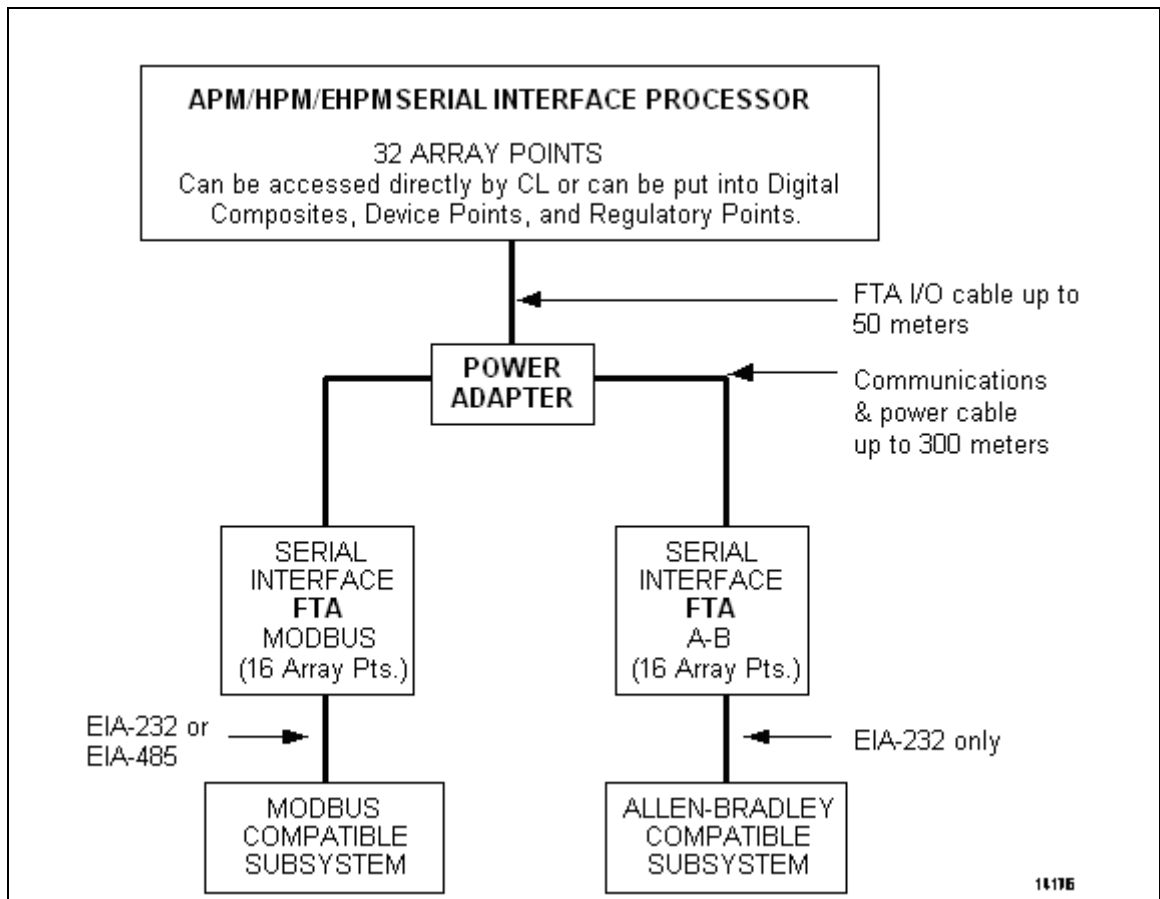

Figure 3 — PM/APM/HPM/EHPM I/O Functions

The Modbus SI FTA supports Modbus RTU protocol and uses either EIA-232 or EIA-422/485 communications, including multidrop configurations. The Allen-Bradley FTA supports DF-1 protocol and uses only EIA-232 communication.

The serial interface supports direct digital communications to any qualified, compatible subsystem. Using this scheme, serial data is then made available for all APM, HPM, and EHPM data acquisition and control strategies. Using the 16 available array points, an SI FTA has a nominal capacity of up to:

- 8192 Flags (Boolean) or
- 256 Reals (Floating Point) or
- 512 Integers or
- 1024 Characters.

The array point values can be displayed at the Universal Station or used as part of advanced control strategies. These values can be configured into APM, HPM, and EHPM control strategies using Digital Composites, Device Points, and Regulatory Points as well as CL programs. Both reads and writes of subsystem data are supported.

To assure smooth field integration of a variety of subsystems, subsystem devices with the serial interface are qualified as part of Honeywell's Multi-Vendor Interface Program.

In addition, custom interfaces can be designed to meet your specific interfacing requirements. Contact your account manager for more information.

### 3.3. Pulse Input (PI)

Precise control using high-accuracy pulsing-type sensing devices is possible with the Pulse Input processor. The result is improved product quality and reduced material waste. Pulse rates up to 20 kHz can be handled. Conversion to engineering units is performed, along with alarm checking, filtering, and data validity checking. 24 Vdc transmitter power is provided.

### 3.4. Analog Output

Two versions of the Analog Output IOP are available: one with 8 outputs and one with 16 outputs.

Both processors provide the following functions

- Readback check of actual output current
- Output characterization (5 segment)
- Output default action on failure (hold or unpowered)
- Modes and associated functions to support Manual loader and DDC control
- Software calibration

The 8-pt. analog output processor provides separate D/A converters and power regulator per channel for maximum output security. As an option, one-on-one Analog Output processor redundancy (available for both versions) provides even higher control strategy integrity.

The 16-pt analog output processor may be used with HART<sup>®</sup> field devices if the Model MU-THAO11 or MU-GHAO11 FTA is selected. These FTAs provide a connector for an external HART subsystem, and incorporate filters to prevent interference between the HART<sup>®</sup> signals and the TPS system.

### 3.5. Digital Input

Two Digital Input IOP models are available, both with 32 inputs. The Digital Input Processor provides the following functions:

- Event counting (accumulation) (maximum pulse rate = 15 Hz)
- Push-button and status type inputs (minimum on-time = 40 ms)
- Time deadband on alarms for status inputs

- Input direct/reverse
- PV source selection
- State or change of state alarming for status inputs
- Sequence of events resolution of 20 ms

Several voltage types are handled through a selection of FTAs. As an option, one-on-one Digital Input processor redundancy is available.

### 3.6. Digital Input Sequence of Events (APM, HPM, and EHPM only)

This specialized digital input processor (DISOE) provides all the functions of the conventional Digital Input except accumulation. Inputs from the board can be used for control strategies just like any other digital input. Note that the DISOE IOP is supported by the APM, HPM, and EHPM *only*.

In addition, this DISOE processor provides high-resolution sequence of events monitoring. Using the DISOE processor, SOE time stamp resolution within 1 ms is assured.

The DISOE processor provides optimum resolution when used with the standard 24 Vdc Digital Input FTA.

Optional one-on-one redundancy is available for higher availability

### 3.7. Digital Output

Two versions of the Digital Output IOP are available: one with 16 outputs and one with 32 outputs. Both processors provide the following functions:

- Output types (configurable per output)
  - Latched
  - Pulsed
  - Pulse-width modulated
- Output default action on failure (hold or unpowered)
- Output readback checking

The 16-point digital output processor provides separate output latches with redundant power regulators for added output security. As an option, one-on-one Digital Output processor redundancy is available for the 32-output IOP.

### 3.8. Fieldbus IOP (Obsolete Product)

The Fieldbus IOP and its associated Field Termination Assemblies (FTAs) as well as any power supplies or isolator modules used for Fieldbus applications have been discontinued. . For Full Fieldbus capability please refer to the Field Device Manager (FDM) product line.

### 3.9. I/O Simulation Option (APM/HPM/EHPM only)

The optional I/O Simulator package simulates the functions of the IOPs for the APM, HPM, and EHPM. It is a low cost, high fidelity simulation approach for control strategy checkout or for operator training support. A unique feature of this optional package is complete database transportability between the Simulation personality and the APM, HPM, or EHPM On-Process (normal operating) personality. This is especially useful for configuring the system before the physical I/O is available or connected. Features of the package include:

- “Bumpless” pause/resume interruption/restart
- Physical IOPs, FTAs and field wiring not required
- Simulation status indicated and journaled
- Database (checkpoint) transportable to target system
- Simulation rerun from saved data base using PV data

- Full peer-to-peer capability
- I/O functions simulated by Communications processor
- Almost any I/O configuration can be simulated
- Simulation load and status supported on system network
- Fault response testing and I/O redundancy simulation

The benefits of this package include

- The ability to perform high fidelity simulation
- Control strategy checkout
- Operator training
- Project cost savings

The HPM/EHPM I/O simulator package does not support the Fieldbus IOP

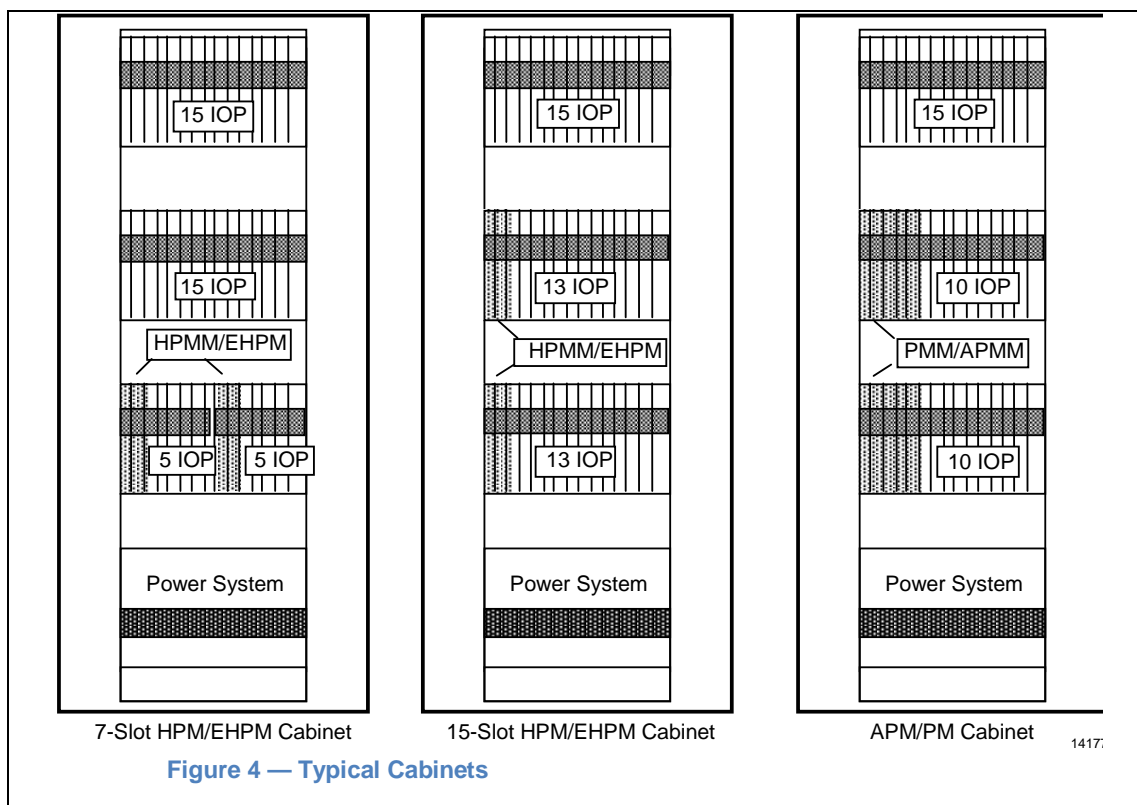

### 3.10. Card File Assemblies

A maximum of 40 logical IOPs can be configured per PM, APM, HPM, and EHPM. A “logical” IOP consists of either a single IOP or a redundant IOP pair). Typical PM, APM, HPM, and EHPM configurations may vary, but they generally consist of up to three cardfiles plus a power supply system. Each cardfile row may contain up to 15 module slots. (Refer to Figure 4.)

When options such as I/O redundancy and/or remote I/O are used, configurations with up to 8 “logical” card files can be provided.

One or two card files contain the PM, APM, HPM, or EPM Module(s). All remaining card file slots can be filled with any combination of I/O Processors. Note that 7-slot files which are used for the HPM/EHPM (i.e., not for PM or APM) can also be filled with IOPs. This “IOP only” configuration can be used to provide I/O for PMs and APMs as well.

With 7-slot HPM/EHPM files, a single cabinet side can hold up to 40 I/O Processors along with redundant High-Performance Process Manager Modules or redundant Ethernet High-Performance Process Manager Modules. Figure 4 shows typical cabinet layouts with redundant EHPMs/HPMs, APMs, and PMs.

### 3.11. Field Termination Assemblies

All connections to and from the process are made to Field Termination Assemblies (FTAs). Compression-type termination blocks (that can accept wire sizes as large as 14 AWG or ~1.6 mm) are available for all FTAs. Screw-type terminations can also be provided for most FTAs as shown in Table 1 in the "Specifications" section. The FTAs are connected to the I/O processors by cables that can be up to 50 meters in length. Three sizes of FTAs are used as shown in this table. Twenty-four Vdc transmitter and digital inputs sense power connections are provided through the standard FTA cable.

## 4. Options

### 4.1. I/O Redundancy

A one-on-one I/O redundancy option is also available for critical high level analog inputs, smart transmitter interface connections, analog outputs, digital inputs and digital outputs. This option offers significantly increased availability of automatic control by providing continuous operation through failure and replacement of I/O Processors, FTA cables, backplanes, and AO switching hardware. Up to 40 I/O Processors can be supported in a redundant or non-redundant PM, APM, HPM, or EHPM, and the user can selectively apply redundancy to some or all IOPs, for a maximum of 40 IOP pairs. The one-on-one design approach offers maximum coverage and fast switchover times. Integrity of the backup database and of the switching functions is provided through the extensive diagnostic coverage made possible by the processing capability of the smart I/O Processors.

### 4.2. Galvanically Isolated/ Intrinsic Safe FTAs

These FTAs are available for applications requiring a direct interface to either FM or CSA Class 1, Div 1, or CENELEC Zone 0 hazardous areas. Wiring and installation are simplified because integral galvanically isolated intrinsic safety isolators are part of the FTA. See GA03-100, Galvanic Isolation/ Intrinsic Safety Specification and Technical Data for further information.

### 4.3. Standby Manual

The 16-point digital output FTA and both analog output FTAs (8-point and 16-point) support connection to a standby manual unit. This option allows outputs to be maintained during I/O Processor replacement. Note that MU/MC-GHA011 does not include standby manual connectors.

### 4.4. Remote I/O

Remote I/O options are available to enable IOPs and FTAs to be distributed at up to six remote sites (see Figure 5). Using redundant fiber-optic cables to extend the I/O Link, remote I/O installation benefits from inherent immunity against ground potential differences and EMI/RFI. In addition, remote installation of IOPs and FTAs can significantly reduce signal wire runs.

Two options are available. The Remote I/O option supports remote sites up to 1 kilometer from the main PM/APM/HPM/EHPM electronics, while the Long Distance I/O option provides for separation of up to 8 kilometers. Either option requires an I/O link Extender pair (IOLE) at both ends. The 1-km option supports up to three remote sites for each IOLE, while the 8-km option requires one IOLE per remote site.

FTAs at the remote site may be located an additional 50 meters from the I/O Processors. LLAI Mux, Serial Device, or Serial Interface FTAs may be located an additional 300 meters away. The RHMUX FTA may be located an additional 2 km away.

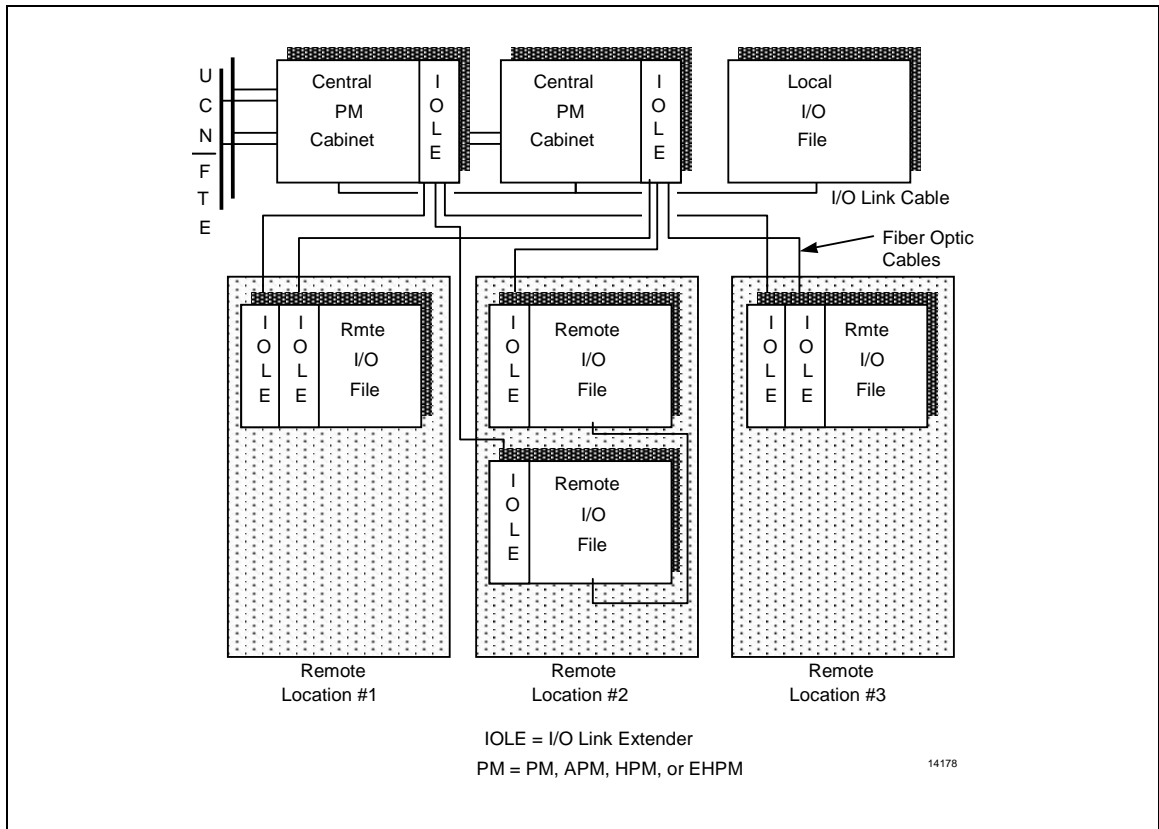

Figure 5 — Fiber Optic Remote I/O

#### 4.5. Corrosion Protection Option

As electronic board layouts have become more compact, sensitivity to corrosion has increased. In addition, a trend toward locating I/Os closer to the process to save installation costs has generated a requirement for environmentally hardened products. To provide extra corrosion protection when PM/APM/HPM/EHPM equipment cannot be located in a mild (G1) environment, board sets are conformally coated as a standard feature. These boards are completely covered with a thin plastic film resistant to the corrosive effects of humidity and certain gases, and are thus suitable for placement in a harsh (G3) atmosphere. Coating is optional for most PM/APM/HPM/EHPM system components, such as IOPs, FTAs, power supplies and backplanes. Many components are coated as a standard, such as the HLA IOP, AO IOP, and HPM/EHPM controller board set.

All coated products are denoted by a "C" in the second character of their model number. Uncoated boards maintain the standard MU-xxxxxx style numbers; therefore, all products for which conformal coating is available have two model numbers. For example, the uncoated DI IOP model number is MU-PDIX02, and the coated version is MC-PDIX02. In order to easily identify coated IOPs in the field, they are labeled with a distinctive symbol located on their faceplate (see Figure 6). The "C" surrounded by a solid diamond (the universal symbol of hardness) represents the protection this conformal coating process provides.

**Note:** Boards installed and maintained in a G1 (mild) control room environment (defined by the ISA Environmental Severity Classification) do not need this added protection.

Figure 6 — IOP Conformal Coating Symbol Location

### 4.6. Harsh Environment Option

To help reduce wiring and installation costs, as well as free up valuable control room space, a Remote Hardened I/O (RHIO) NEMA4X sealed cabinet option is available for remotely mounting PM/APM/HPM/EHPM I/O (see Figure 7). Backplanes and power supplies included with RHIO are conformally coated. When populated with conformally coated IOPs, FTAs, and Fiber Optic Extenders, the RHIO option provides a GX “Severe” environment product rating against corrosion due to humidity and corrosive gases in remote locations.

The IOP cabinet accommodates a 7-slot file and a redundant 8-amp power supply and is available as a standard product; the FTA cabinet must be custom ordered due to the many variations of FTA sizes and layouts.

Figure 7 — Remote Hardened I/O Option

### 5. European Community (EC) Compliance

The APM, HPM, and EHPM are available in compliance with European Community (EC) directive requirements, denoted by the "CE mark" (Communauté Européenne). The PM is not covered. This compliance extends to the APMM/HPMM/EHPM, cardfiles, power supplies, IOPs and FTAs, as well as to Rittal cabinets. Since January 1, 1996, all goods imported into the European community or moving between member countries must be compliant with the new EC directives.

For APMM/HPMM/EHPM, customers must indicate whether or not CE compliance is required. APMMs, HPMMs, EHPMs, IOPs, and power supplies are only available CE-compliant. For cardfiles and some FTAs, both compliant and non-compliant versions are available. Only Rittal cabinets are CE-compliant. Please refer to Table 1 for IOP/FTA more information. Note that the system must be mounted in a standard Rittal cabinet per Honeywell specifications, use only standard Honeywell/Rittal mounting hardware, and be installed according to Honeywell instructions.

## 6. Specifications

Specifications apply to the PM/APM/HPM/EHPM I/O modules mounted in a standard cabinets. See PM/APM/HPM/EHPM Specification and Data Sheets for more information.

### 6.1. I/O Link Extender (Remote I/O)

Parameter	Specification	
	Remote I/O Link Extender	Long Distance I/O Link Extender
Fiber Link Length	1.2 km	8 km
Fiber Size	62.5/125 $\mu\text{m}$	62.5/125 $\mu\text{m}$
Wave Length	820 nanometers	1300 nanometers
Fiber Power Budget Over-Temperature Range	5.5 dB	10.0 dB
Note: Fiber optic cables are supplied by outside vendors in accordance with Honeywell specifications. For additional information, see the <i>PM/APM Process Manager Planning</i> manual, PM02-501, Section 9.		

### 6.2. European Community Compliance (CE-Mark)

<b>CE Conformity (Europe)</b>	This product is in conformity with the protection requirements of the following European Council Directives: 73/23/EEC, the Low Voltage Directive, and 89/336/EEC, the EMC Directive. Conformity of this product with any other "CE Mark" Directive(s) shall not be assumed.  <i>Deviation from the prescribed procedures and conditions specified in the installation manuals may invalidate this product's conformity with the Low Voltage and EMC Directives. See Table 1 for IOP and FTA model information.</i>
<b>Product Classification</b>	Class I: Permanently mounted, permanently connected Industrial Control Equipment with protective earthing (grounding). (EN 61010-1-1993)
<b>Installation Category</b>	Category II: Energy-consuming equipment supplied from the fixed installation. Local Level Appliances and Industrial Control Equipment. (EN 61010-1-1993)
<b>Pollution Degree</b>	Pollution Degree 2: Normally non-conductive pollution with occasional conductivity caused by condensation. (IEC 664-1-1992)
<b>EMC Classification</b>	Group 1, Class A, Industrial, Scientific and Medical (ISM) Equipment. (EN55011-1991; Emissions)
<b>Method of Assessment</b>	EMC: Technical Construction File (TCF) LVD: Technical File (TF)

## 6.3. High Level Analog Input Processor - 16 Inputs

## MC-PAIH03

Parameter	Specification
FTA Models	MU-TAIH02, TAIH12, TAIH52, TAIH03, TAIH13, TAIH23, TAIH53, TAIH22, TAIH62
Input Type	Voltage, current (2-wire or self-powered transmitters)
Input Channels	16 differential input channels
Common Mode Rejection Ratio, dc to 60 Hz (500 $\Omega$ source imbalance)	70 dB
Common Mode Voltage, dc to 60 Hz <sup>(1)</sup>	-6 to +5 V peak
A/D Converter Resolution	16 bits (14 bits used)
Input Range	0 to 5 V 1 to 5 V 0.4 to 2 V 4-20 mA (through 250 $\Omega$ )
Normal Mode Rejection Ratio, at 60 Hz	32 dB
Normal Mode Filter Response	Single-pole RC, -3 dB @ 1 Hz
Maximum Normal Mode Input (differential inputs, no damage)	$\square$ 30 Volts
Crosstalk, dc to 60 Hz (channel-to-channel)	60 dB
Input Impedance (Voltage Inputs)	> 10 M $\Omega$ powered
Maximum Input Voltage (any input referenced to common, no damage)	$\square$ 30 Volts
Input Scan Rate	4 samples per second per channel. All channels sampled within a 250 ms window.
Hardware Accuracy (@ CMV = 0 V)	$\square$ 0.075% full-scale (23.5° $\square$ 2°C) $\square$ 0.15% full-scale (0 to 50°C)
Transmitter Power Conditioning MU-TAIH02, TAIH52, TAIH12, TAIH03, TAIH13, TAIH53 MU-TAIH22, TAIH23, & TAIH62	Resistor Current Limited, 145 $\Omega$ (not fused) for Class 1, Div 2 interfacing Individually Protected Current Limiting Circuits for Class 1, Div 2 interfacing Maximum current: 30 ma Minimum voltage 23 V
Surge withstand capability (Common mode)	ANSI/IEEE C37.90.1-1978
(1) The low-side input connection is normally connected to system common by a wire jumper on the FTA. This can be removed by the user, subject to operating within the CMV specification.	

#### 6.4. High Level Analog Input Processor Redundancy Option

##### MU-TAIH12, TAIH52, TAIH13, TAIH53, TAIH22, TAIH23, TAIH62

Parameter	Specification
Input Scan Cycles Missed or Delayed During Swap or Failover	No cycles missed or delayed
Hardware Accuracy Effect of Failure	No effect nominally <input type="checkbox"/> 2% of FS maximum (at 0 V Common Mode)

6.5. Low Level Analog Input Processor - 8 Inputs

MU-PAIL02

Data Conversion Performance	
Parameter	Specification
FTA Model	MU-TAIL02, TAIL03
Input Type	Thermocouple, RTD, Voltage, & Current (2-wire transmitters require separate power source)
Input Channels	8 galvanically isolated
A/D Converter Resolution	15 bits
Input Range	See table on following page
CMV, dc to 60 Hz	250 Vac rms or $\pm 250$ Vdc
Dielectric Strength	1500 Vac rms or $\pm 1500$ Vdc Channel-to-channel, and channel-to-PM/APM/HPM/EHPM common
CMRR, dc to 60 Hz	120 dB min. w/1k lead imbalance
NMRR, at line frequency	60 dB min.
Normal Mode Filter Response	-3 dB point: Typical 10.6 Hz; min. 9.6 Hz; max. 11.9 Hz
Crosstalk, dc to 60 Hz	120 dB
Input Impedance	5 k $\Omega$ min. @ 0-5 Vdc (unpowered)
Input Impedance	10 M $\Omega$ min. @ 0-5 Vdc (powered)
Maximum Normal Mode Input (no damage)	-20 mV to 5.5 Volt
Input Scan Rate	8 samples per second per channel. All channels sample simultaneously. 4 samples per second per channel for thermocouple input if open thermocouple detection enabled.
Line Frequency Synchronization Type Frequency Range	Running Average 50/60 Hz +3%, -6%
Hardware (only) Accuracy (0-100 mV, 0-5 V)	$\pm 0.05\%$ of full scale, or $\pm 0.075\%$ of reading at 23.5 $\Omega$ $\pm 2\Omega$ C (whichever is larger)
Software (only) Accuracy <sup>(1)</sup>	$\pm 0.1\Omega$ C typical, $\pm 0.5\Omega$ C maximum at 23.5 $\Omega$ $\pm 2\Omega$ C
Hardware Reference Junction Accuracy	$\pm 0.9\Omega$ C maximum at 23.5 $\Omega$ $\pm 2\Omega$ C (in cabinet)
Temperature Stability Voltage Input, current input, thermocouple input (except reference junction) RTD Input	45 ppm/ $\Omega$ C RSS 70 ppm/ $\Omega$ C maximum 50 ppm/ $\Omega$ C RSS 85 ppm/ $\Omega$ C maximum
Surge withstand capability (common mode)	ANSI/IEEE C37.90.1-1978
(1) Software EU conversion error including software reference junction compensation. The temperature conversion by software meets or exceeds the accuracy tolerances for fifth order polynomials as specified in the National Institute of Standards and Technology (NIST) Monograph 125 (IPTS-68).	

<b>Signal Types and Ranges</b>

6.6. Low Level Analog Input Multiplexer Processor - 32 Inputs

**MU-PLAM02**

Data Conversion Performance (General Specifications)	
Parameter	Specification
<b>FTA Models</b>	<b>MU-TAMR03, TAMT03, TAMT13</b>
Input Type	Thermocouple, RTD, and linear millivolts
Input Channels	32 galvanically isolated
A/D Converter Resolution	14 bits TC types J, K, E, T, B, S, R, RP: 10 $\mu$ V per bit 100 $\square$ and 120 $\square$ RTDs: 64 m $\square$ per bit 10 $\square$ RTD: 8 m $\square$ per bit Linear mV sensors: 20 $\mu$ V per bit
CMV, dc to 60 Hz	250 Vac Peak or $\pm$ 250 Vdc
Dielectric Strength	1500 Vac rms or $\pm$ 1500 Vdc channel-to-channel (operating), and channel-to-PM/APM/HPM/EHPM common (not operating)
Crosstalk, dc to 60 Hz	120 dB
Input Impedance	2 M $\square$ min. @ 100 mV
Maximum Normal Mode Continuous Input (No damage)	-1 V to 10 V
Input Scan Rate	32 samples per second (each channel once per second)
Line Frequency Synchronization	Configurable to 50 or 60 Hz
Hardware (only) Accuracy	$\pm$ 40 $\mu$ V, or $\pm$ 160 m $\square$ 23.5 $\square$ $\pm$ 2 $\square$ C
Software (only) Accuracy <sup>(1)</sup>	$\pm$ 0.1 $\square$ C typical, $\pm$ 0.5 $\square$ C maximum at 23.5 $\square$ $\pm$ 2 $\square$ C
Surge withstand capability (common mode)	ANSI/IEEE C37.90.1-1978
(1) Software EU conversion error including software reference junction compensation, at reference temperature. The temperature conversion by software meets or exceeds the accuracy tolerances for fifth order polynomials as specified in the National Institute of Standards and Technology (NIST) Monograph 125 (IPTS-68).	
<b>NOTE:</b> Mercury-Wetted Relays are used in this product.

**Remote Hardened Multiplexer Processor - 32 Inputs (continued)**

**MU-PRHM01**

<b>Data Conversion Performance (Thermocouple and Voltage Input)</b>	
<b>Parameter</b>	<b>Specification</b>
Voltage Input Signal Range	0 to 100 mV
CMRR <sup>(2)</sup> , dc to 60 Hz	90 dB min, 1000Ω lead resistance, DC or line frequency 120 dB min, 0Ω lead resistance, DC or line frequency
Hardware Reference Junction Accuracy	±1°C max error in 20 to 25°C static environment
Calibration Stability: Voltage input or thermocouple input (except reference junction)	±50 ppm per °C max
Open Thermocouple Detection	Performed on every conversion ≤1000Ω good, ≥1200Ω PV = NAN
T/C Max loop resistance	1000Ω total loop resistance
<b>Environmental Specifications</b>	
<b>Parameter</b>	<b>Specification</b>
Operating Temperature	-40 to +85°C at Remote FTA 0 to +50°C cabinet ambient for IOP and power adapters
Operating Humidity	10 to 100% condensing, Remote FTA 10 to 90% non-condensing, IOP and power adapters
Corrosives	Gx, Remote FTA G1 or G3 for IOP and power adapters, depending on corrosion option
<p>Notes:</p> <p>(1) Software EU conversion error including software reference junction compensation, at reference temperature. The temperature conversion by software meets or exceeds the accuracy tolerances for fifth-order polynomials as specified in the National Institute of Standards and Technology (NIST) monograph 125 (IPTS-68).</p> <p>(2) CMRR = Common Mode Rejection Ratio</p>	

## 6.8. Smart Transmitter Interface Processor\*

**MU-PSTX03**

<b>Parameter</b>	<b>Specification</b>
<b>FTA Models</b>	<b>MU-TAIH02, TAIH12, TAIH22, TAIH52, TAIH62, TSTX03, TSTX13, TSTX53</b>
Input Type	Honeywell DE (digital enhanced) protocol (bidirectional)
Input Channels	16 digital input channel PVs
Resolution	The resolution of the connected field instrument is passed through without degradation.
Maximum Input Voltage (any input referenced to common, no damage)	-10 V to +30 V
Transmitter broadcast frequency (PV)	2.4-3.6 PVs per second per channel (configuration dependent).
Accuracy	The accuracy of the connected field instrument is passed through without degradation.
Surge withstand capability (Common mode)	ANSI/IEEE C37.90.1-1978
Transmitter Power Conditioning MU-TAIH02, MU-TAIH52, MU-TAIH12, MU-TSTX03, MU-TSTX13, MU-TSTX53 MU-TAIH22 & TAIH62	Resistor Current Limited, 145 $\Omega$ (not fused) for Class 1, Div 2 interfacing Individual Protected Current Limiting Circuits for Class 1, Div 2 interfacing Maximum current: 30 ma Minimum voltage 23 V

## 6.9. Smart Transmitter Interface Processor\* Redundancy Option

### MU-TAIH12, TAIH52, TSTX13, TSTX53

Parameter	Specification
Input Scan Cycles Missed or Delayed During Swap or Failover	No cycles missed or delayed
Hardware Accuracy Effect of Failure	No effect nominally. The resolution of the connected field instrument is passed through without degradation.

\* Smart Transmitter Interface Processor (MU-PSTX03) supports both single and multivariable transmitter types.

## 6.10. Serial Device Interface (General Specifications)

**MU-PSDX02**

<b>Parameter</b>	<b>Specification</b>
<b>FTA Models</b>	<b>MU-TSDM02, TSDT02, TSDU02</b>
Input Channels	1 galvanically isolated serial channel per FTA
Interface Type	EIA-232, EIA-422 or EIA-485
Points per FTA (Maximum of two FTAs per IOP)	1-8
Points per IOP	1-16
Common Mode Voltage, dc to 60 Hz	250 Vac rms or $\pm 250$ Vdc
Dielectric Strength	1500 Vac rms or $\pm 1500$ Vdc (channel to PM/APM/HPM/EHPM)
Surge withstand capability	ANSI/IEEE C37.90.1-1978

## 6.11. Serial Device Interface - Toledo Weigh Cell

MU -TSDT02

Parameter	Specification
Physical Interface	EIA-232 using DB-25 female connector
Device Supported	Toledo Weigh Cell Model Number 8142-2089
Lines Supported (EIA-232)	Transmit Data, Receive Data, Request To Send, Clear To Send, Data Set Ready, Data Terminal Ready, Data Carrier Detect, Logic Ground, Protective Ground
Full Modem Support	No
Distance, Power Adapter to FTA	<input type="checkbox"/> Internal cable within PM/APM/HPM/EHPM cabinet or <input type="checkbox"/> External cable 300 m (1000 ft.) maximum
EIA-232 Cable Length, FTA to Device	15 m (2500 pF cable capacity maximum)*
Surge withstand capability	ANSI/IEEE C37.90.1-1978
ESD Protection	IEC 801.2
Number of Toledo Weigh Cells	<input type="checkbox"/> 2 FTAs per SDI IOP <input type="checkbox"/> 1 Toledo Weigh Cell per FTA
Baud Rate	9600 bps fixed rate
Data Transfer	Bidirectional, Half-Duplex
Message Validity	<input type="checkbox"/> Single-bit character parity <input type="checkbox"/> Message block checksum

\* Consult factory for longer lengths.

## 6.12. Serial Device Interface - Manual/Auto Station

**MU-TSDM02**

Parameter	Specification
Physical Interface	EIA-485 Multidrop using 5-terminal compression connector
Device Supported	Honeywell Manual/Auto Station
Lines Supported (EIA-485)	R (Data+), Data+, Shield, Data-, R (Data-)
Full Modem Support	No, Multidrop is not a modem interface
Distance, Power Adapter to FTA	<input type="checkbox"/> Internal cable within PM/APM/HPM/EHPM cabinet or <input type="checkbox"/> External cable 300 m (1000 ft.) maximum
EIA-485 Cable Length, FTA to Device	1.2 km (4000 ft.) with appropriate cable*
Surge withstand capability	ANSI/IEEE C37.90.1-1978
ESD Protection	IEC 801.2
Number of Manual/Auto Stations	<input type="checkbox"/> 2 FTAs per SDI IOP <input type="checkbox"/> 4 Manual/Auto Stations per FTA
Baud Rate	19.2 Kbps
Transmission Mode	Asynchronous, Bit Serial
Data Transfer	Bidirectional, Half-Duplex
Message Validity	<input type="checkbox"/> Single-bit character parity <input type="checkbox"/> Message block checksum
Tag ID Downloaded	8 Characters
PV Range	EUHI and EULO downloaded
Input Scan Rate	Four updates per second per point

\* Refer to PM I/O Installation manual (PM20-520).

## 6.13. Serial Device Interface - UDC 6000 Process Controller

MU-TSDU02

Parameter	Specification
Physical Interface	EIA-485 Multidrop using 5-terminal compression connector
Device Supported	Honeywell UDC 6000 with Modbus Communication Option
Lines Supported (EIA-485)	R (Data+), Data+, Shield, Data-, R (Data-)
Full Modem Support	No—Multidrop is not a modem interface
Distance, Power Adapter to FTA	<input type="checkbox"/> Internal cable within APM cabinet or <input type="checkbox"/> External cable 300 m (1000 ft.) maximum
EIA-485 Cable Length, FTA to Device	1.2 km (4000 ft.) with appropriate cable*
Surge withstand capability	ANSI/IEEE C37.90.1-1978
ESD Protection	IEC 801.2
Number of UDC 6000s	<input type="checkbox"/> 2 FTAs per SDI IOP <input type="checkbox"/> 4 UDC 6000s per FTA
Baud Rate	19.2 Kbps
Transmission Mode	Asynchronous, Bit Serial
Data Transfer	Bidirectional, Half-Duplex
Communication Protocol	Modbus Remote Terminal Unit (RTU) protocol
Message Validity	<input type="checkbox"/> Single-bit character parity <input type="checkbox"/> Message block checksum

\* Refer to PM I/O Installation manual (PM20-520).

6.14. Serial Interface I/O Processor/FTA - Modbus

MU-TSIM12

Parameters	Specification
Physical Interface	EIA-232 or EIA-485
Devices Supported	Multivendor Qualified Modbus Compatible Devices
Distance, Power Adapter to FTA	<input type="checkbox"/> Internal cable within APM/HPM/EHPM cabinet or <input type="checkbox"/> External cable 300 m (1000 ft.) maximum
Surge withstand capability	ANSI/IEEE C37.90.1-1978
ESD Protection	IEC 801.2
Number of Devices per SI	<input type="checkbox"/> 2 FTAs per SI <input type="checkbox"/> Up to 15 devices per FTA
Data Quantity per IOP	16 Points per serial channel (organized as Arrays in the APM/HPM/EHPM) Each point can access <i>one</i> of the following: 512 Booleans into FLAGS 16 Reals or 32 Integers into NUMERICS 64 NUMERICS (Diagnostic Counter Data Only) 1 STRING of 64 Characters 2 STRINGS of 32 Characters 4 STRINGS of 16 Characters 8 STRINGS of 8 Characters
Serial Data Format	8 data bits with programmable 9th bit
EIA RS232 Support Transmission Mode: Lines Supported: Distance, FTA to Device:	Serial asynchronous, bidirectional TXD, RXD, RTS, CTS, DSR, DTR, DCD, Logic GND, Protective GND 15 m (2500 pf cable capacity maximum)
EIA-RS485 Support Transmission Mode: Lines Supported: Common Mode Operation: Number of drops: Distance, FTA to Device:	Serial asynchronous, bidirectional, half duplex only Two wire, differential pair: Data+(B), Data-(A), Protective GND (shield) 250 Vac rms (continuous) 15 drops maximum 1.2 Km (4000 ft.) maximum
Modbus Interface Specification Protocol: Serial Line Mode: Selectable Baud Rates: Selectable Parity: Number of Stop Bits: Modem Control Support: Keep Alive Cell Write Message Response Timeout: Exception Errors Reported: Data Formats Supported: Intermessage stall time: Function Codes Supported:	(Default parameters are shown in <b>bold</b> .) Modbus, Remote Terminal Unit (RTU) <b>RS232</b> or RS485 1200, 2400, 4800, 9600, <b>19200</b> bps None, <b>odd</b> , or even 1 Selectable ON/ <b>OFF</b> Configurable address/ <b>NONE</b> Configurable timeout/ <b>1.5 seconds</b> All Boolean, Real, ASCII Strings, Signed Integers 3.5 character time minimum 01, 02, 03, 04, 05, 06, 08, 16

## 6.15. Serial Interface I/O Processor/FTA - Allen-Bradley

MU-TSIA12

Parameters	Specification
<b>General</b> Interface Type: Number of Channels per IOP: Distance, Power Adapter to FTA: Baud Rate: Serial Data Format with parity bit: Common Mode Operation:	EIA-RS232 2 300 m (1000 ft.) 19.2 k bps 8 data bits 250 V rms (continuous)
<b>EIA-RS232 Support</b> Interface Type: Lines Supported: Distance, FTA to Device:	Serial asynchronous TXD, RXD, Logic GND, Protective GND 15 meters (cable cap. = 2500 pF max.)
<b>SI A-B Specific Interface Specifications</b> Protocol: Transmission Mode: Serial Line Mode: Parity: No. Stop Bits: Modem Control Support: ACK Timeout: FTA Message Response Timeout: Data Formats Supported: CIM Communication Options:	Full Duplex Allen-Bradley DF1 with embedded responses Character oriented RS232 even 1 Off 3.2 sec. 4.0 sec. Booleans, Reals, Signed/Unsigned Integers, ASCII Strings Pass-through diagnostic Accept duplicate message BCC error check
<b>Allen-Bradley Family Types Supported:</b>	PLC-2 PLC-3 (Native Mode and PLC-2 Mode) PLC-5, except PLC-5/250 (Native Mode and PLC-2 Mode)

## 6.16. Allen-Bradley File Types

<b>APM/HPM Array Point Types</b>	<b>PLC-5 File Types</b>	<b>PLC-3 Files Types</b>
Flag	Output (O), Input (I), Status (S)	Output (O), Input (I), Status (S)
Flag	Bit (B)	Binary (B)
Numeric (16-bit Signed Integer)	Integer (N)	Integer (N)
Numeric (IEEE Single Precision)	Float (F) (IEEE Format)	Float (F) (VAX F Format)
Numeric (16-bit Unsigned Integer)	Timer (T), Counter (C) (READ ONLY)	
String	ASCII (A)	ASCII (A)

## 6.17. Pulse Input Processor/FTA

## MU-PPIX02

Parameters	Specification
<b>FTA Models</b>	<b>MU-TPIX12, TPIX52</b>
Sensor Inputs	Self-powered 2-wire PM/APM/HPM/EHPM-powered (with automatic current limiting) 3-wire Pulse voltage or contact input
Input Type	Rectangular or sine waves
Input Channels	8
Input Impedance	10 k $\Omega$ minimum
Input Frequency <sup>(1)</sup> 50% Duty Cycle Square Wave Sine Waves	1 Hz to 20 kHz (all channels same amplitude) 1 Hz to 20 kHz
Pulse Levels Low High	-0.5 V to +1.9 V +3.5 V to +24 V (Hysteresis prevents change between 1.9 V and 3.5 V)
Pulse Width (On/Off Dwell) High and Low	25 $\mu$ s minimum at 20 kHz (with IOP filter jumper in storage position) 50 $\mu$ s minimum at 10 kHz (with IOP filter jumper in H position) 500 $\mu$ s minimum at 1 kHz (with IOP filter jumper in L position)
Contact Current Low (0, Field contact closed) High (1, Field contact open)	23 mA maximum (with FTA Pullup) <sup>(2)</sup> 20 mA maximum (with FTA Pullup) <sup>(2)</sup>
Contact Resistance Low (0, Field contact closed) High (1, Field contact open)	82 $\Omega$ maximum (with FTA Pullup) <sup>(2)</sup> 175 $\Omega$ minimum (with FTA Pullup) <sup>(2)</sup>
Field Input Scan Rate	20 ms
AV Update Rate (Used for Totalizer Algorithm)	20 ms
PV Update Rate	500 ms for 8 channels
Rate Accuracy	$\pm$ 0.01% of input frequency, $\pm$ 0.4 Hz (whichever is larger)
Rate Resolution	$\pm$ 0.4 Hz
Input Range (No Damage)	$\pm$ 30 V maximum
Transmitter Power Conditioning (for 3- wire connection) Open Circuit Voltage Full Load Short Circuit Current	23-25 Vdc 21 V @ 115 mA 150 mA maximum
<p>(1) Sine waves must not be intermixed with square waves or contacts on the same FTA.  50 M FTA cables with mixed signal amplitudes: frequency is 9 kHz maximum (55 <math>\mu</math>s minimum pulse width)  30 M FTA cables: frequency is 13 kHz maximum (38 <math>\mu</math>s minimum pulse width)  20 M FTA cables: frequency is 15 kHz maximum (33 <math>\mu</math>s minimum pulse width)  10 M FTA cables: frequency is 18 kHz maximum (28 <math>\mu</math>s minimum pulse width)  5 M FTA cables: frequency is 20 kHz maximum (25 <math>\mu</math>s minimum pulse width)</p> <p>(2) 1 k<math>\Omega</math> to 24 Vdc.</p>	

## 6.18. Analog Output 8-Point Processor/FTA

**MC-PAOX03**

Parameter	Specification
FTA Models	<b>MU-TAOX02, TAOX12, TAOX52</b>
Output Type	4-20 mA
Output Channels	8
Output Ripple	100 mV peak-to-peak at power line frequency, across 250 $\Omega$ load
Output Temperature Stability	0.02% Full Scale/ $\Omega$ C
Resolution	$\pm 0.05\%$
Calibrated Accuracy	$\pm 0.35\%$ (25 $\Omega$ C) including linearity
Output Readback Checking Accuracy	$\pm 4\%$
Humidity	10 - 90% non-condensing
Directly Accessible Output Current Range	0.1-21.4 mA
Maximum Current Output	26 mA
Maximum Resistive Load	750 $\Omega$ @ 22 mA
Output Settling Time (digital input code to 98% of final output value)	4 ms
Surge withstand capability	ANSI/IEEE C37.90.1-1978

## 6.19. Analog Output 8-Point Processor Redundancy Option

**MU-TAOX12, TAOX52**

<b>Parameter</b>	<b>Specification</b>
Output Signal Perturbation During Swap	1 ms nominal 4 ms maximum
Output Signal Perturbation During Failover	30 ms nominal 125 ms maximum
FTA Switching Hardware Diagnostic Frequency	Once per minute

## 6.20. Analog Output 16-Point Processor/FTA

**MU-PAOY22**

Parameter	Specification
FTA Models	<b>MU-TAOY22, TAOY52, THAO11, GHAO11</b>
Output Type	4-20 mA
Output Channels	16
Output Ripple	100 mV peak-to-peak at power line frequency, across 250 $\Omega$ load
Output Temperature Stability	$\pm 0.02\%$ Full Scale/ $\square$ C (all except MU-GHAO11) $\pm 0.025\%$ Full Scale/ $\square$ C (MU-GHAO11)
Output Readback Accuracy	$\pm 4\%$
Humidity	$\square 0.1\%$ full scale (50% RH $\square$ 40% RH)
Output Current Linearity	$\pm 0.05\%$ nominal
Resolution	$\pm 0.05\%$
Calibrated Accuracy	$\pm 0.35\%$ (25 $\square$ C) including linearity (all except MU-GHAO11) $\pm 0.45\%$ (25 $\square$ C) including linearity (MU-GHAO11)
Directly Settable Output Current Range	0 mA, 2.9 mA to 21.1 mA
Absolute Max Current Output for AO Value Digital Input Code	24 mA
Maximum Resistive Load (24 V supply = 20 V)	750 $\Omega$ @ 20 mA (MU-TAOY22, TAOY52) 720 $\Omega$ @ 20 mA (MU-THAO11) 870 $\Omega$ @ 20 mA (MU-GHAO11)
Maximum Output Compliant Voltage (24 V supply = 20 V)	15 V (MU-TAOY22, TAOY52) 14.4 V (MU-THAO11) 17.4 V (MU-GHAO11)
Output Settling Time (digital input code to 98% of final output value)	4 ms
Surge Withstand Capability	ANSI/IEEE C37.90.1-1978

## 6.21. Analog Output 16-Point Processor Redundancy Option

### MU-TAOY22, TAOY52, THAO11, GHAO11

Parameter	Specification
Gap (0 mA) of Output to Field on Failover	20 ms maximum
Switching Hardware Diagnostic Frequency	Once per minute

6.22. Digital Input Processor and Digital Input Sequence of Events Processor

MU-PDIX02/MU-PDIS12

FTAs with Removable Plug-In Isolators			
Parameter	Specification		
	24 Vdc FTA	120 Vac FTA 125 Vdc FTA	240 Vac FTA

Output Channels	16 (Outputs are independent from each other and can use independent load power supplies.)	16 (Outputs are independent from each other and can use independent load power supplies.)	16 (Outputs are independent from each other and can use independent load power supplies.)
Output Type	Normally open power transistor switch per output (emitter and collector terminals are both available to the user.)	Normally open triac switch per output (both triac terminals are available to the user)	Normally open power transistor switch per output (emitter and collector terminals are both available to the user.)
Load Voltage Range	13, 53 3-30 Vdc 14, 54 5-30 Vdc	120/240 Vac	31-200 Vdc
FTA Max Continuous Load Current	1.25 Adc per output <sup>(2)</sup>	1.25 Adc per output <sup>(2)</sup>	0.5 Adc per output <sup>(2)</sup>
Load Fuse Rating <sup>(5)</sup>	2.5 A 125 V slow blow (5x20 mm) fuse per output (readily replaceable in fuseholders)	2.5 A 125 V slow blow (5x20 mm) fuse per output (readily replaceable in fuseholders)	1 A 125 V slow blow (5x20 mm) fuse per output (readily replaceable in fuseholders)
Fuse Type (BUSS)	GDC-2.5 A	GDC-2.5 A	GDC-1 A
Load Power Factor	N/A	Must be 0.5 or greater <sup>(1)</sup>	N/A
Min. Load Current <sup>(3)</sup>	10 mAdc	50 mA (rms)	10 mAdc
Isolation	1500 V (rms) (field terminals to system power supply common)	1500 V (rms) (field terminals to system power supply common)	1500 V (rms) (field terminals to system power supply common)
On-State Voltage Drop	(@ max. load current) 13, 53 1.6 V max. 14, 54 3.0 V max.	1.6 V max. (@ max. load current)	3.0 V max. (@ max. load current)
Off-State Leakage Max.	13, 53 10 µAdc max. 14, 54 100 µAdc max.	5 mA rms	100 µAdc max.
Turn-on/Turn-off Time	1 ms max.	Next zero voltage/next zero current <sup>(4)</sup>	1 ms max.
Contact Suppression (Shunt)	Diode clamp	Resistor/capacitor snubber plus varistor per output	Diode clamp
Surge withstand capability	ANSI/IEEE C37.90.1-1978	ANSI/IEEE C37.90.1-1978	ANSI/IEEE C37.90.1-1978

(1) Load power factors less than 0.5 can damage the triac switches. Additional resistor/capacitor snubbing must be added across the triac as discussed in the appropriate *Installation* manual for load power factors less than 0.5; otherwise a load with power factor 0.5, or greater, must be used.

(2) Individual output rated at maximum 2 Adc, provided that total current for two adjacent channels does not exceed 2.5 amps.

(3) Surge current rating of solid-state switch at 20 °C non-repeating.

(4) As much as 0.5 line cycle (8.33 ms for 60 Hz line) for power factor <1.0.

(5) Actual fuse rating is slightly greater than the maximum FTA output allowed. "Use the FTA Max Continuous Load Current" section for maximum FTA output rating.

(Continued)

**Digital Output 16-Point Processor** (continued)**MU-PDOX02**

<b>Solid State</b> (continued)	
<b>Parameter</b>	<b>Specification</b>
<b>24 Vdc Nonisolated FTA</b>	
FTA Models	<b>MU-TDON12, MU-TDON52</b>
Output Channels	16 (outputs referenced to power supply common)
Output Type	Open-collector (current-sinking) NPN transistors
Output Volt. States <sup>(1)</sup>	ON-state: 0-2 Vdc (maximum) OFF-state: "Ref +" terminal voltage (24 Vdc nominal)
Maximum Load Current	100 mA per output <sup>(2)</sup>
Minimum Load Current	1 mA per output
Output Isolation	None (any screw terminal to common)
On-State Voltage Drop	2 V max. @ max. load current
Off-State Leak. Current	100 $\mu$ A max. @ max. output voltage
Turn-on/Turn-off Time	10 $\mu$ s
Contact Suppression (Shunt)	Diode per output to "Ref +" terminal <sup>(3)</sup>
Output Transient Protection	(See Contact Suppression)
<p>(1) Because of the open-collector transistor configuration of the outputs, the nominal off-state output voltage is the load power supply ("Ref +") voltage, nominally +24 Vdc, minus any voltage across the load caused by off-state leakage current.</p> <p>(2) All outputs ON (100% duty cycle) at maximum operating temperature.</p> <p>(3) User must diode-suppress any inductive loads (such as relay coils) as close as possible to the load.</p>

Function IOP Models	AO (8 points) MC-PAOX03	AO (16 points) MU-PAOY22
IOP Configuration	AO	AO_16
Number of Channels	8	16
Smallest ORU <sup>(1)</sup>	IOP	IOP
Redundancy <sup>(2)</sup>	Yes	Yes
Redundancy Method	Outputs Electrically Isolated via Field Replaceable Relay Switch Module on FTA	Parallel Outputs -- Solid-State Switch in IOPs
Redundancy Bias <sup>(3)</sup>	Yes	No
Output Condition on IOP failure <sup>(4)</sup>	Configurable	Unpowered
Output Condition on PMM failure <sup>(5)</sup>	Configurable	Configurable
Single Channel Failure Robustness <sup>(6)</sup>	High	Medium
External Connection Check <sup>(7)</sup>	Yes	Yes
Standby Manual <sup>(8)</sup>	Yes	Yes
Supports Direct Landing of HART Signals	No	Yes

- (1) The Optimal Replaceable Unit (ORU) is the object that can be replaced on a failure that minimally impacts the operation of the system. The ORU is generally an item that can be replaced in the field using a minimum number of tools. In many cases the item is plug replaceable such as the IOP.
- (2) Failure detection coverage for the redundancy option is equivalent.
- (3) In a redundant configuration, the primary is a "preferred" primary. System availability is slightly increased when the primary IOP is the "preferred" Primary. Servicing of the FTA switching module can be performed without disturbing the process when the IOP is the "preferred" primary.
- (4) The output state upon failure of the AO8 IOP is configurable to either **Hold** or **Unpower** the output. AO16 outputs are always set to **Unpowered** upon failure of the IOP.
- (5) The output state upon failure of the PMM for both AO8 and AO16 IOPs is configurable to either **Hold** or **Unpower** the output.
- (6) Channel robustness is different in the two module types. The AO8 provides individual channel output circuitry including individual output power systems and individual DAC output circuits. The AO16 provides one power supply and one DAC per IOP. Individual AO16 outputs are controlled using sample and hold circuitry.
- (7) Point level failures are detected by both AO8 and AO16 IOPs. Both IOPs can detect if the output is being correctly propagated to the field (i.e., wires are connected).
- (8) The Standby Manual is an optional unit which handles 8 outputs. The AO16 provides a Standby manual function by using two AO8 standby manual units connected into the AO16 FTA.

### 6.30. Digital Input IOP Comparison

Function IOP Models	DI (32 points) MU-PDIX02	DI (32 points) MU-PDIY22	DI SOE (32 points) MU-PDIS12
Number of Channels	32	32	32
IOP Configuration <sup>(1)</sup>	DI	DI	DISOE
Maximum Input Voltage @ FTA	250 V ac/dc	30 Vdc	250 V ac/dc
Smallest ORU <sup>(2)</sup>	2 Channels	IOP	2 Channels
Redundancy	No	Yes	Yes
<p>(1) The DI24V is configured into the TPS PM system as a standard DI IOP. This permits using the DI24 V IOP in systems on releases prior to R500. Any PM system requiring only 24 Volt Digital Inputs can use the DI24 V IOP.</p> <p>(2) The Optimal Replaceable Unit (ORU) is the object that can be replaced on a failure that minimally impacts the operation of the system. The ORU is generally an item that can be replaced in the field using a minimum number of tools. In many cases the item is plug replaceable such as the IOP.</p>			

## 6.31. Digital Output IOP Comparison

Function IOP Models	DO (16 points) MU-PDOX02	DO (32 points) MU-PDOY22
IOP Configuration	DO	DO_32
Number of Channels	16	32
Smallest ORU <sup>(1)</sup>	1 Channel	IOP
Redundancy <sup>(2)</sup>	No	Yes
Redundancy Method	Solid-state switch in IOP	Solid-state switch in IOP
Relay Minimum Load current Relay FTA)	100 ma	10 ma
Standby Manual Supported	Yes	No
Output Overload Protection <sup>(3)</sup>	Fuses on FTA per channel	<ul style="list-style-type: none"> <li>• Fuses on 24 Vdc FTA</li> <li>• No fuse on relay FTA</li> </ul>
Contact Bounce Suppression-Relay FTA	Always Installed	Configurable via Jumper
Galvanic Output Isolation - Relay FTA <sup>(4)</sup>	per Channel	per Channel
Galvanic Output Isolation - SS FTA <sup>(4)</sup>	per Channel	no per channel isolation
Galvanic Output Isolation <sup>(4)</sup>	per Channel	per 16 Channels
Output Condition on IOP Failure <sup>(5)</sup>	Configurable	Unpowered
Output Condition on PMM Failure <sup>(6)</sup>	Configurable	Configurable
Output Readback Check <sup>(7)</sup>	Yes	Yes
Number of FTAs Supported <sup>(8)</sup>	5 (See Below)	2 (Direct & Relay)
<p>(1) The Optimal Replaceable Unit (ORU) is the object that can be replaced on a failure that minimally impacts the operation of the system. The ORU is generally an item that can be replaced in the field using a minimum number of tools. In many cases the item is plug replaceable such as the IOP.</p> <p>(2) Readback check coverage for the redundancy option is not equivalent. See Output Readback Check.</p> <p>(3) Compression-type relay FTA for DO-32 has 1 fuse per 2 points. Screw-type relay FTA for DO-32 has 1 fuse per 8 points. Current overload protection for the DO16 is provided on a per channel basis based on the particular FTA used.</p> <p>(4) All Outputs are galvanically isolated from system common.</p> <p>(5) The output state upon failure of both the DO16 and DO32 IOP is configurable to either <b>Hold</b> or <b>Unpower</b> the output. The DO32 outputs are set to <b>Unpowered</b> when the on-board power regulator (5 V) has failed.</p> <p>(6) The output state upon failure of the PMM (or APMM or HPMM or EHPM) for both DO16 and DO32 IOPs is configurable to either <b>Hold</b> or <b>Unpower</b> the output.</p> <p>(7) The DO32 performs register readback check on the IOP. The DO16 performs actual output readback check including the FTA and FTA cable.</p> <p>(8) DO16 FTA types are: 120 Vac Electro-Mechanical Relay; 240 Vac Electro-Mechanical Relay; 24 Vdc @100 ma Non-Isolated; 20-200 Vdc Solid State; 3-30 Vdc Solid State; 120/240 Vac Solid State; 31-200 Vdc Solid State.</p>

- (1) Length: A = 15.24 cm/6.0 in.  
 B = 30.73 cm/12.1 in.  
 C = 46.228 cm/18.2 in.
- (1) Width: All FTAs except GI/IS FTAs = 12.065 cm/4.75 in.  
 All GI/IS FTAs = 12.446 cm/4.90 in.  
 MU/MC-TAIL03 = 13.335 cm/5.25 in.
- (2) Requires Power Adapter FTA.
- (3) Terminals are on top of the GI/IS modules.
- (4) One FTA supports up to 16 circuits. When 17-32 circuits are used, 2 FTAs are required. Bridge cable MU-KBFT01 or MU-KBFT02 is required to connect the two FTAs.
- (5) Number of Circuits denotes number of logical connections.
- (6) For nongalvanically isolated FTAs, the terminal connector types are compression (C), nonremovable screw (S), and removable screw (RS). For galvanic isolation type FTAs, the terminal connector types are compression (C), and crimp pin (CP). The Marshalling Panel has nonremovable screw (S) terminals.
- (7) The MC-GRMT01 is a remotely mountable Field Termination for Thermocouple inputs. Two of these FTAs can be connected to a single Power Adapter (MU-GRPA01 or MU-TRPA01) depending on the hazardous environment. The Power Adapter is, in turn, connected to the IOP (MU-PRHM01).

Analog Output FTA for Redundancy (8 Outputs) **	MU-TAOX12	MC-TAOX12
Analog Output 16 FTA (16 Outputs), w/StbyMan (use ONLY w/ MU-PAOY22)**	MU-TAOY22	MC-TAOY22
Analog Output 16 FTA (16 Outputs), w/StbyMan and HART® connector (use ONLY w/ MU-PAOY22)**	MU-THAO11	MC-THAO11
GI/IS Analog Output 16 FTA (16 Outputs), w/o StbyMan, w/HART® connector (use ONLY w/ MU-PAOY22)**	MU-GHAO11	MC-GHAO11
Digital Input Isolated 120 Vac FTA (32 Inputs)	MU-TDIA12	MC-TDIA12
Digital Input Isolated 240 Vac FTA (32 Inputs)	MU-TDIA22	MC-TDIA22
Digital Input 24 Vdc FTA (32 Inputs)	MU-TDID12	MC-TDID12
Digital Input 24 Vdc FTA (32 Inputs) (use ONLY w/ MU-PDIY22)**	MU-TDIY22	MC-TDIY22
Digital Output 120/240 Vac Solid-State FTA (16 Outputs)	MU-TDOA13	MC-TDOA13
Digital Output 3-30 Vdc Solid-State FTA (16 Outputs)	MU-TDOD13	MC-TDOD13
Digital Output 3-30 Vdc Solid-State FTA (16 Outputs) (CE Mark)	MU-TDOD14	MC-TDOD14
Digital Output 31-200 Vdc Solid-State (16 Outputs)	MU-TDOD23	MC-TDOD23
Digital Output 24 Vdc, 100 ma Nonisolated FTA (16 Outputs)	MU-TDON12	MC-TDON12
Digital Output 120 Vac/125 Vdc Relay FTA (16 Outputs)	MU-TDOR12	MC-TDOR12
Digital Output 240 Vac/125 Vdc Relay FTA (16 Outputs)	MU-TDOR22	MC-TDOR22
Digital Output 24 Vdc FTA (32 Outputs) (use ONLY w/ MU-PDOY22)**	MU-TDOY22	MC-TDOY22
Digital Output Relay FTA (16 Outputs) (use two w/ MU-PDOY22)**	MU-TDOY23	MC-TDOY23
<p>* For DIN-style FTAs, Cables and File Options, See the <i>Site Planning</i> manual.                      ** These FTAs can be used for single or redundant applications.                      All FTAs are available conformally coated (MC-models).</p>		

**Model Numbers** (continued)

Description	Uncoated Model Number	Coated Model Number
<b>Field Termination Assemblies (Phone Connector* Style with Screw Terminals)</b>		
High Level Analog Input/STI FTA (16 Inputs)**	MU-TAIH52	MC-TAIH52
High Level Analog Input FTA (16 Inputs) (CE Mark)**	MU-TAIH53	MC-TAIH53
Smart Transmitter Interface FTA for Redundancy (16 Inputs) (CE Mark)**	MU-TSTX53	MC-TSTX53
Enhanced Power High Level Analog Input/STI FTA (16 Inputs)**	MU-TAIH62	MC-TAIH62
Pulse Input FTA (8 Inputs)	MU-TPIX52	MC-TPIX52
Analog Output FTA (8 Outputs)**	MU-TAOX52	MC-TAOX52
Analog Output 16 FTA (16 Outputs), w/StbyMan (use ONLY w/ MU-PAOY22)**	MU-TAOY52	MC-TAOY52
Digital Input Isolated 120 Vac FTA (32 Inputs)	MU-TDIA52	MC-TDIA52
Digital Input Isolated 120 Vac FTA -Packaged (32 Inputs)	MU-TDIA72	MC-TDIA72
Digital Input Isolated 240 Vac FTA (32 Inputs)	MU-TDIA62	MC-TDIA62
Digital Input 24 Vdc FTA (32 Inputs)	MU-TDID52	MC-TDID52
Digital Input 24 Vdc FTA -Packaged, without plug-in isolators (32 Inputs)	MU-TDID72	MC-TDID72
Digital Input 24 Vdc FTA (32 Inputs) (use ONLY w/ MU-PDIY22)**	MU-TDIY62	MC-TDIY62
Digital Output 120/240 Vac Solid-State FTA (16 Outputs)	MU-TDOA53	MC-TDOA53
Digital Output 3-30 Vdc Solid-State FTA (16 Outputs)	MU-TDOD53	MC-TDOD53
Digital Output 3-30 Vdc Solid-State FTA (16 Outputs) (CE Mark)	MU-TDOD54	MC-TDOD54
Digital Output 31-200 Vdc Solid-State (16 Outputs)	MU-TDOD63	MC-TDOD63
Digital Output 5-200 Vdc Solid State (16 Outputs)	MU-TDOD62	MC-TDOD62
Digital Output 24 Vdc, 100 ma Nonisolated FTA (16 Outputs)	MU-TDON52	MC-TDON52
Digital Output 120 Vac/125 Vdc Relay FTA (16 Outputs)	MU-TDOR52	MC-TDOR52
Digital Output 240 Vac/125 Vdc Relay FTA (16 Outputs)	MU-TDOR62	MC-TDOR62
Digital Output 24 Vdc FTA (32 Outputs) (use ONLY w/ MU-PDOY22)**	MU-TDOY62	MC-TDOY62
Digital Output Relay FTA (16 Outputs) (use two w/ MU-PDOY22)**	MU-TDOY63	MC-TDOY63
<b>Field Termination Assemblies for Serial Device Interface and Serial Interface</b>		
Serial Device Interface FTA for Toledo Scale (8142)	MU-TSDT02	MC-TSDT02
Serial Device Interface FTA for Manual/Auto Station	MU-TSDM02	MC-TSDM02
<p>* For DIN-style FTAs, Cables and File Options, See the <i>Site Planning</i> manual.</p> <p>** These FTAs can be used for single or redundant applications.</p> <p>All FTAs are available conformally coated (MC- models).</p>		

**Model Numbers** (continued)

Description	Model Number	
Serial Device Interface FTA for UDC 6000	MU-TSDU02	MC-TSDU02
Serial Interface FTA for Modbus	MU-TSIM12	MC-TSIM12
Serial Interface FTA for Allen-Bradley	MU-TSIA12	MC-TSIA12
<b>Display Units</b>		
Manual/Auto Station	MU-MASX02	
<b>EIA - 485 Cables</b>		
SDI/SI FTA EIA - 485 Cable (30.5 m/100 ft.)	MU-KSX030	
SDI/SI FTA EIA - 485 Cable (152.4 m/500 ft.)	MU-KSX152	
SDI/SI FTA EIA - 485 Cable (304.8 m/1000 ft.)	MU-KSX305	
<b>Standby Manual Units (Phone Connector* Style)</b>		
Analog Output Standby Manual (8 Outputs) with Case and 3 Meter Cable	MU-SMAC02	
Digital Output Standby Manual (16 Outputs) with Case and 3 Meter Cable	MU-SMDC02	
Digital Output Standby Manual (16 Outputs - mounts similar to FTA) with Cable	MU-SMDX02	
<b>Cabinets and Cabinet Components (Markhon Style)</b>		
Cabinet - Dual Access (.8 W x .8 D x 2.1 H [meters])	MU-CBDM01	
Cabinet - Single Access (.8 W x 5.5 D x 2.1 H [meters])	MU-CBSM01	
Cabinet Lifting Eyebolts (4)	MU-CLBM01	
Cabinet (Dual Access) Forklift Base	MU-CFDM01	
Cabinet (Single Access) Forklift Base	MU-CFSM01	
Cabinet Trim File Filler Panel	MU-CTFP11	
Vertical Trim Panel Set - Full Height	MU-CTVF11	
Vertical Trim Panel Set - Half Height	MU-CTVH11	
FTA Mounting Channel - Narrow	MU-TMCN11	
FTA Mounting Channel with Shield Ground Bar - Narrow	MU-TMCN12	
FTA Mounting Channel - Wide	MU-TMCW11	
FTA Mounting Channel with Shield Ground Bar - Wide	MU-TMCW12	
<b>Cabinets and Cabinet Components (Rittal Style)</b>		
Cabinet - Dual Access (.8 W x .8 D x 2 H [meters])	MU-CBDX01	
Cabinet - Single Access (.8 W x .5 D x 2 H [meters])	MU-CBSX01	
Cabinet Trim File Filler Panel	MU-CTFP01	
Vertical Trim Panel Set - Full Height	MU-CTVF01	
Vertical Trim Panel Set - Half Height	MU-CTVH01	
FTA Mounting Channel - Narrow	MU-TMCN01	
FTA Mounting Channel with Shield Ground Bar - Narrow	MU-TMCN02	
FTA Mounting Channel - Wide	MU-TMCW01	
FTA Mounting Channel with Shield Ground Bar - Wide	MU-TMCW02	

<b>Cabinet Fan Assemblies (All Styles)</b>	<b>Uncoated Model Numbers</b>	<b>Coated Model Numbers</b>
Cabinet Fan Assembly (240 Vac-50/60 Hz)	MU-FAN501	n/a
Cabinet Fan Assembly with Alarm (240 Vac-50/60 Hz)	MU-FAN511	MC-FAN511
Cabinet Fan Assembly (120 Vac-50/60 Hz)	MU-FAN601	n/a
Cabinet Fan Assembly with Alarm (120 Vac-50/60 Hz)	MU-FAN611	MC-FAN611

\* For DIN-style FTAs, Cables and File Options, See the *Site Planning* manual.  
 \*\* These FTAs can be used for single or redundant applications.

**Model Numbers (continued)**

Description	Uncoated Model Numbers	Coated Model Number
<b>Power Systems Including, or Upgradeable to, System Battery Backup</b>		
Redundant Power System with Mounting (20 A)	MU-PSRX04	MC-PSRX04
Single Power System with Mounting (20 A)	MU-PSSX04	MC-PSSX04
Redundant Power System with System Battery Backup Mounting (20 A)	MU-PSRB04	MC-PSRB04
HPM Power System (20 A) Upgrade Kit (upgrade from MU/MC-PSxx03 only)	MU-ZPSR04	MC-ZPSR04
<b>Harsh Environment Option</b>		
Remote Hardened I/O Encl, 110 Vac, Left (1-7) <sup>(1)</sup>	MU-CBSS01	
Remote Hardened I/O Encl, 110 Vac, Right (9-15) <sup>(1)</sup>	MU-CBSS02	
Remote Hardened I/O Encl, Left (1-7), No Power Supply	MU-CBSS11	
Remote Hardened I/O Encl, Right (9-15), No Power Supply	MU-CBSS12	
Remote Hardened I/O Encl, 220 Vac, Left (1-7) <sup>(1)</sup>	MU-CBSS21	
Remote Hardened I/O Encl, 220 Vac, Right (9-15) <sup>(1)</sup>	MU-CBSS22	
<b>AC-Only Power Systems</b>		
AC-Only Redundant Power Supply 120 Vac (8 A)	MU-PAR111	
AC-Only Redundant Power Supply 240 Vac (8 A)	MU-PAR211	
AC-Only Single Power Supply 120 Vac (8 A)	MU-PAS111	
AC-Only Single Power Supply 240 Vac (8 A)	MU-PAS211	
AC-Only Redundant Power Supply 120 Vac (16 A)	MU-PAR121	
AC-Only Redundant Power Supply 240 Vac (16 A)	MU-PAR221	
AC-Only Single Power Supply 120 Vac (16 A)	MU-PAS121	
AC-Only Single Power Supply 240 Vac (16 A)	MU-PAS221	
AC-Only Power System Cover Plate	MU-PACP01	
<b>24 Vdc Power Distribution</b>		
Power Distribution FTA (24 Vdc)	MU-TDPR02	MC-TDPR02
(1) Includes enclosure, power distribution panel, backplane, and 8 A, redundant power supplies.		

<b>Digital Sense Power Cables</b>	<b>Model Number</b>
Power Distribution (24 Vdc) (5 m)	MU-KDPR05
Power Distribution (24 Vdc) (10 m)	MU-KDPR10
Power Distribution (24 Vdc) (15 m)	MU-KDPR15
Power Distribution (24 Vdc) (20 m)	MU-KDPR20
Power Distribution (24 Vdc) (25 m)	MU-KDPR25
Power Distribution (24 Vdc) (30 m)	MU-KDPR30
Power Distribution (24 Vdc) (35 m)	MU-KDPR35
Power Distribution (24 Vdc) (40 m)	MU-KDPR40
Power Distribution (24 Vdc) (50 m)	MU-KDPR50
CE-Mark Power Distribution (24 Vdc) (lengths, xx, same as MU-KDPRxx)	MU-KSPRxx
